Hello Ehud,

Thanks for the video it is very impressive and I can't wait to produce one...

Also Efraim's comment:

Dear Mr. Barak
.
we are familiar with the video and info
I remind you that the UAV presented in the video can Cary only 2.5 kg payload
If you look in details the wings are joint by a round carbon tube this is far from being good structurally. .
We have an optimal design with a square beam reinforced with unidirectional laminate on top and bottom of bean 4 Times stronger from zephyr UAV with the same weight
Also they say they will reduce the weight by a half but are not mentioning the payload so it is a bit tricky

Regards
.
Ephrim

Ofer Hi
Once again. In case this is a better version.
Pl forward to EM and ShTz.
Best
EB
